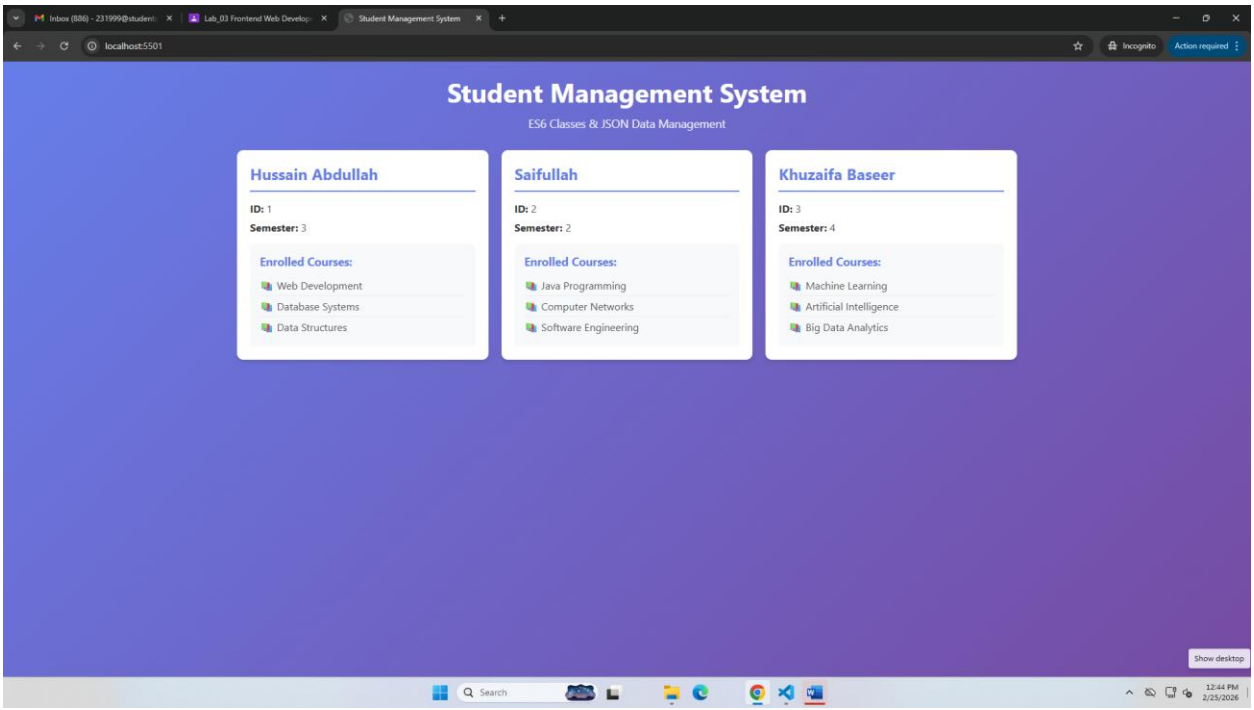
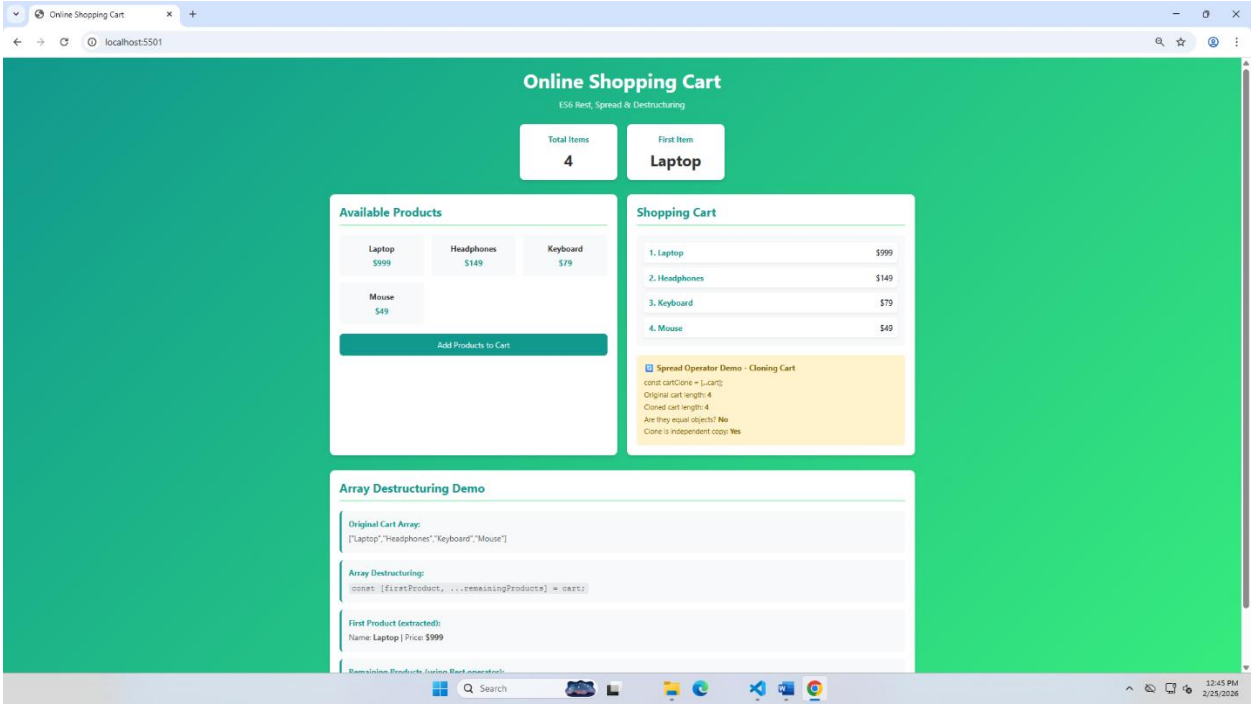
TASK - 1



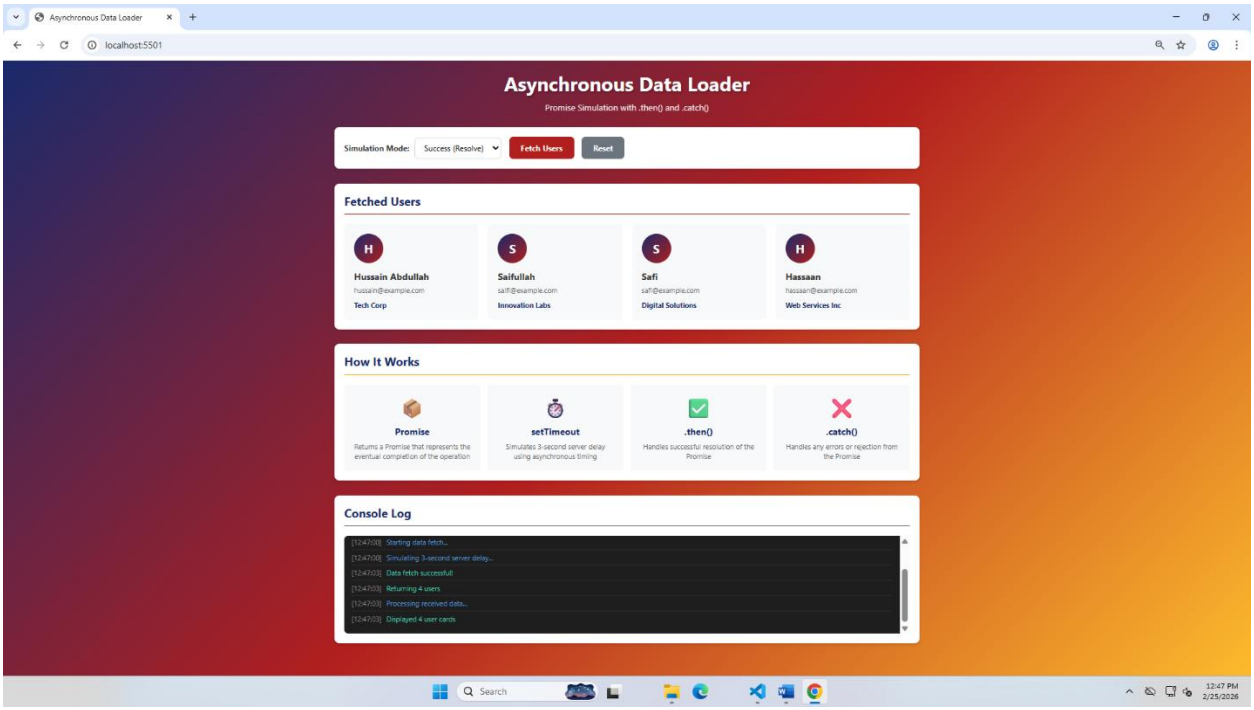
Student Management System
localhost:5501
Student Management System
ES6 Classes & JSON Data Management
Hussain Abdullah
ID: 1
Semester: 3
Enrolled Courses:
Web Development
Database Systems
Data Structures
Saifullah
ID: 2
Semester: 2
Enrolled Courses:
Java Programming
Computer Networks
Software Engineering
Khuzaifa Baseer
ID: 3
Semester: 4
Enrolled Courses:
Machine Learning
Artificial Intelligence
Big Data Analytics

TASK - 2



Online Shopping Cart
localhost:5501
Online Shopping Cart
ES6 Rest, Spread & Destructuring
Total Items
4
First Item
Laptop
Available Products
Laptop
$999
Headphones
$149
Keyboard
$79
Mouse
$49
Add Products to Cart
Shopping Cart
1. Laptop $999
2. Headphones $149
3. Keyboard $79
4. Mouse $49
Spread Operator Demo - Cloning Cart
const cartClone = [...cart];
Original cart length: 4
Cloned cart length: 4
Are they equal objects? No
Clone is independent copy: Yes
Array Destructuring Demo
Original Cart Array:
["Laptop","Headphones","Keyboard","Mouse"]
Array Destructuring:
const [firstProduct, ...remainingProducts] = cart;
First Product (extracted):
Name: Laptop | Price: $999

TASK - 3



Asynchronous Data Loader
localhost:5501
Asynchronous Data Loader
Promise Simulation with .then() and .catch()
Simulation Mode:
Success (Resolve)
Fetch Users
Reset
Fetched Users

Web Services Inc
How It Works
Promise
Returns a Promise that represents the eventual completion of the operation
setTimeout
Simulates 3-second server delay using asynchronous timing
.then()
Handles successful resolution of the Promise
.catch()
Handles any errors or rejection from the Promise
Console Log
[12:47:00] Starting data fetch...
[12:47:00] Simulating 3-second server delay...
[12:47:03] Data fetch successful!
[12:47:03] Returning 4 users
[12:47:03] Processing received data...
[12:47:03] Displayed 4 user cards
